[Parathyroid Functions in Thalassemia Major Patients](#)

<h2>Abstract</h2>

<p>Background: Hypoparathyroidism is well known to occur in thalassemia

major patients, but it is thought to be uncommon and its incidence is considered to be decreasing with improvements

in chelation therapy. The objective of this ...

[Effect on Vitamin D status of Breastfeeding Infants after Vitamin D3 Supplementation during Breastfeeding Lactation: A double-blind randomized controlled trial](#)

<h2>Abstract</h2>

<p>Background: Vitamin D deficiency in pregnancy increases several risks of

breastfed mothers. To prevent these adverse events, vitamin D supplementation during pregnancy and lactation is

recommended, but suggested dose ranges vary....

[Recurrent Cardiac Events Driven by Prothrombotic Burden in a Patient Undergoing Lipoprotein Apheresis for High Lp\(a\) Levels](#)

<h2>Abstract</h2>

<p>Introduction: Lipoprotein (a) [Lp(a)] is a marker for cardiovascular disease,

involved in pathogenesis and progression of atherosclerosis. In selected high-risk patients, lipoprotein-apheresis

could optimize secondary prevention ...
